AHCPMG304—Use Firearms to Humanely Destroy Animals

This unit of competency describes the skills and knowledge required to destroy animals humanely using firearms. Shooting is a quick and effective means of humanely destroying animals and in some situations is the only practical method available in the field. Shooting may be conducted on foot or with various vehicles. Techniques in shooting pest animals will depend on the type of animal that is being shot and whether the shooter is stationary or mobile. This unit is not applicable to using firearms from aircraft. This unit applies to individuals who work under broad direction and take responsibility for their own work. They use discretion and judgement in the selection and use of available resources. Firearms licensing conditions apply to this unit. Specific approval should be sought through the relevant State or Territory Firearms licensing agency. Appropriate firearms licences and training are also required for those involved in training and assessment against this unit. Destruction of pest animals must comply with state animal cruelty legislation. In addition to legal responsibilities, all units of competency dealing with animals in the AHC Training Package have the requirements for animals to be handled humanely to minimise stress and discomfort.

Career Opportunities

Primary producer / Research officers / Professional shooters/cullers

Education Pathways

AHC21016 - Certificate II in Conservation & Land Management

AHC30318 - Certificate III in Rural & Environmental Pest Management.

Learning Outcomes
